Professional Summary

Results-driven SDET with 2 years of experience architecting production-grade test automation frameworks from ground up. Expert in building scalable automation solutions using Python and Playwright that reduced test execution time by 73% and manual testing effort by 70%. Specialized in async test architecture, CI/CD pipeline optimization with GitLab, and leveraging AI/ML for intelligent test validation. Track record of maintaining 99.5% pipeline reliability across enterprise applications.

Technical Skills

Languages & Frameworks: Python, Playwright, Pytest, Asyncio, Sentence Transformers, Selenium
Test Automation: API Testing, UI Automation, E2E Testing, Regression Testing, Component Testing
CI/CD & DevOps: GitLab CI/CD (YAML), Pipeline Optimization, Docker, Git, REST APIs, Postman
AI/ML in Testing: Sentence Transformers, NLP-based Validation, Intelligent Test Data Generation
Methodologies: Agile/Scrum, In-Sprint Automation, TDD, Shift-Left Testing, Framework Design

Experience

Software Development Engineer in Test (SDET)

June 2024 – Present

Sonata Software — Client: TUI Group (Email Assist Project)

Bengaluru, India

- **Sole SDET** for AI-powered customer support tool used for email summarization and automated response generation across enterprise-scale operations
- Architected **production-grade automation framework from ground up** with modular architecture, strict separation of concerns for API and UI testing, and CLI-based configuration-driven execution
- Implemented **Sentence Transformers-based semantic validation** for LLM-generated outputs, achieving 95% accuracy in detecting content degradation and hallucination issues
- Built **multi-threaded link validation module** reducing execution time by 75% through parallel processing
- Transformed **100% manual smoke suite (3 hours) to fully automated (20 minutes)** – 89% reduction, and **regression suite from 6 hours to 1 hour** – 83% improvement
- Integrated **headless test execution in GitLab CI/CD** with deployment-triggered automation and real-time Teams notifications, reducing defect resolution time by 40%
- Developed **reusable utility components library** (auth handlers, API wrappers, validators) reducing new test development time by 60% and eliminating code duplication
- Designed **intention score validation mechanism** using keyword similarity to verify AI-generated test data quality and ensure training data integrity
- Maintained **99.5% pipeline success rate** over 12+ months with zero production-critical defects and achieved 100% smoke suite automation coverage, 85% overall regression coverage
- Proactively optimized framework during low-workload periods, implementing async operations, caching mechanisms, and retry logic without supervision

Education

Bachelor of Technology in Computer Science

Annamacharya Institute of Technology and Sciences

Graduated: 2023

CGPA: 7.56/10.0

Certifications

Microsoft Azure Fundamentals (AZ-900) – Microsoft (2024)
